RE: **Toledo Fuels Optimization (TFO) Project Permit Application**

Dear Mr. Park:

Attached is a permit application for a project to make modifications to the BP-Husky Refining LLC Toledo Refinery to increase the flexibility of the refinery to process a higher percentage of crude oil feedstocks similar to that which will soon be available from BPH's Sunrise oil field development in Canada.. This project is called the Toledo Feedstock Optimization (TFO) Project and will not increase the capacity of the refinery, but will allow it to process different crude oils. This application will also be submitted via the Ohio EPA eBusiness (Air Services) website.

Subject to receipt of a permit to install, construction will commence prior to the Fall 2013 turnaround, with completion scheduled for start-up in late 2014. Please feel free to contact Allen Ellett at (419) 697-6064 with any questions you may have regarding the project.

Sincerely,

A handwritten signature in black ink that reads 'Mark C. Dangler'.
