

3745-90-02

Harmful algal blooms - applicability and action levels.

(A) The following action levels for microcystins apply to all public water systems, including consecutive water systems:

(1) 0.3 micrograms per liter (ug/L) for people under the age of six, pregnant women, nursing mothers, those receiving dialysis treatment and those with pre-existing liver conditions.

(2) 1.6 ug/L for all individuals.

(B) Exceedance of these action levels in samples collected at a finished water sampling point or a distribution sampling point will require additional monitoring, treatment optimization, and potentially other actions as described in Chapter 3745-90 of the Administrative Code.
