

Human Cremation

Not all Ohio counties possess a crematory so only those counties with crematories are included in calculating the resulting NOx emissions. Cremation data is obtained from the Ohio Department of Health, Vital Statistics. The methodology does not offer an EF for NOx for this category nor is NOx required to be calculated for this area source. Ohio feels that it is a combustion source and NOx must be included in the inventory along with the other combustion sources. Through its Permits-to-Install for human cremation, Ohio has selected a NOx EF of 10.13lb/ton cremated to calculate emissions from this area source.
