

Calculation Worksheet – Ammonia and Hydrogen Sulfide Emissions
Swine Operations
 February _____, 2009

KEEP THIS WORKSHEET FOR YOUR RECORDS-DO NOT SUBMIT WITH YOUR REPORT

The final rule on EPCRA reporting issued by EPA on December 18, 2008 and effective January 20, 2009 requires reporting of ammonia and hydrogen sulfide emissions **if** the swine facility has 2500 or more swine over 55 pounds, or 10,000 swine under 55 pounds; **and** the ammonia exceeds 100 lbs/day **or** the hydrogen sulfide exceeds 100 lbs/day. If the ammonia or hydrogen sulfide is less than 100 lbs/day, enter "N/A" in the appropriate cell of Section 4 in the reporting form.

Swine Facility Name: _____.

AMMONIA (NH₃) EMISSIONS ESTIMATE

Enter your head count in the blank and multiply times the appropriate Emission Rate to equal the emission estimate for the facility.

AMMONIA (NH₃) EMISSIONS ESTIMATE				
	Lowest Head Count		Lower Bound NH ₃ Emission Rate (pounds/hd/day)	NH₃ Lower Bound (pounds/day)
NH₃ Lower Bound =		X		=
	Permitted Head Count		Upper Bound NH ₃ Emission Rate (pounds/hd/day)	NH₃ Upper Bound (pounds/day)
NH₃ Upper Bound =		X		=

Hydrogen Sulfide (H₂S) EMISSIONS ESTIMATE

Enter your head count in the blank and multiply times the Emission Rate to equal the emission estimate.

Hydrogen Sulfide (H₂S) EMISSIONS ESTIMATE				
	Lowest Head Count		H ₂ S Emission Rate (pounds/hd/day)	H₂S Lower Bound (pounds/day)
H₂S Lower Bound =		X		=
	Permitted Head Count		H ₂ S Emission Rate (pounds/hd/day)	H₂S Upper Bound (pounds/day)
H₂S Upper Bound =		X		=

Table 1. Swine facility per-animal emission constants. Housing and manure storage estimates are combined. Upper Bounds.

Management group	Pull-plug, scrape, flush, shallow pit	Deep Pit
Breeding & gestation	NH ₃ 0.098 H ₂ S 0.016	NH ₃ 0.052 H ₂ S 0.0085
Farrowing	NH ₃ 0.16 H ₂ S 0.030	NH ₃ 0.022 H ₂ S 0.0028
Nursery	NH ₃ 0.019 H ₂ S 0.0043	NH ₃ 0.0046 H ₂ S 0.0020
Grow-finishing	NH ₃ 0.055 H ₂ S 0.0104	NH ₃ 0.037 H ₂ S 0.0080

Table 2. Swine facility per-animal emission constants. Housing and manure storage estimates are combined. Lower bounds.

Management group	Pull-plug, scrape, flush, shallow pit	Deep Pit
Breeding & gestation	NH ₃ 0.0098 H ₂ S 0.0016	NH ₃ 0.0052 H ₂ S 0.00085
Farrowing	NH ₃ 0.016 H ₂ S 0.0030	NH ₃ 0.0022 H ₂ S 0.00028
Nursery	NH ₃ 0.0019 H ₂ S 0.00043	NH ₃ 0.00046 H ₂ S 0.00020
Grow-finishing	NH ₃ 0.0055 H ₂ S 0.00104	NH ₃ 0.0037 H ₂ S 0.00080

The emissions estimates are derived from research reported by:

Gay, S.W., D.R. Schmidt, C.J. Clanton, K.A. Janni, L.D. Jacobson, S. Weisberg. 2003. Odor, Total Reduced Sulfur and Ammonia Emissions from Animal Housing Facilities and Manure Storage Units in Minnesota. Applied Engineering in Agriculture, 19(3) 347-360, ASABE, St. Joseph, MI.;

and:

Jacobson, L.D., A.J. Heber, S.J. Hoff, Y. Zhang, D.B. Beasley, J.A. Koziel, and B.P. Hetchler. 2006. Aerial Pollutants Emissions from Confined Animal Buildings. Summary report, Ag Air Workshop, USDA-IFAFS research and demonstration program.

These values are a good faith estimate of emissions from swine operations using typical confinement housing and manure storages and located in a temperate climate.
